

LCT Square or Rectangle Boxed Cushion Measure Form for Built-ins

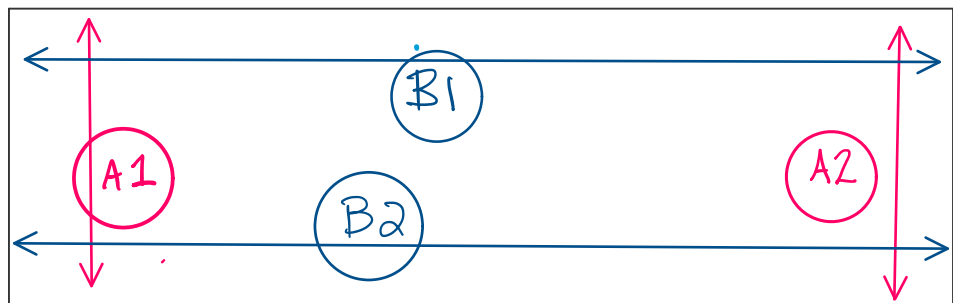

This is for cushions with right angles only and for use for a built in area such as a window seat, nook, or bench. Curves or angled cushions will need to be templated by LCT. Please measure to the nearest 1/8". **Please also provide a picture of each space measured** so we can determine if deductions are required on our end (*we are looking for built in sides, lips, apron intrusion or any red flags we may need to field address.*)

Please use one form for each space to be treated with a cushion.
If there are multiple cushions in each room please sidemark each form Client/ Room/Cushion A (next one B and so on)

Client/ Room Sidemark

Desired boxing height: _____

(This is usually 3" for seating comfort and proportion,, but occasionally it needs to be edited for abnormal seat heights, if the apron interferes, or if client requests. If it needs to fit under an apron please let us known what that space is and we can figure boxing size with cushion crown taken into consideration))

Depth of space in inches:

A1: _____

A2: _____

Width of space in inches

B1: _____

B2: _____
